

**Fleetguard**<sup>®</sup>

# Fleetguard Hydraulic Filtration Solutions

## Simple Serviceability

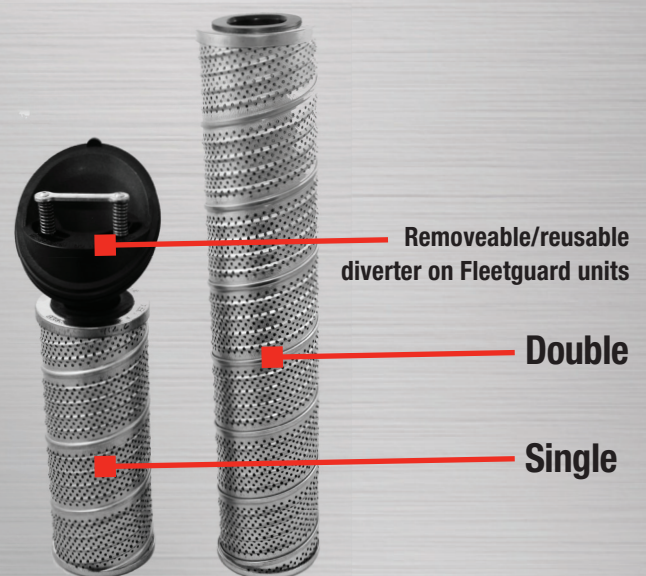

- Cummins Filtration introduces replacement filtration solutions for Parker ModuFlow™ Plus Series used in low pressure mobile and industrial hydraulic equipment applications.
- A reusable diverter design means you no longer have to throw away the entire unit every time like competitive units. Simply remove the diverter and easily place it into a new element during each service event.\*
- This Fleetguard solution enables easy service events with the cartridge design, high filtration performance and greater cost savings.

## Benefits of Switching to Fleetguard

- The new Fleetguard bypass features a robust design, intended to prevent contaminant build up from passing downstream when the valve opens.
- Higher dirt holding capacity and contaminant removal efficiency than the competition.
- Lower flow restriction and pressure drop than the competition.
- Available in a variety of media grades (3, 5, 10 & 25 micron).

**A SMARTER SOLUTION  
FOR TODAY'S EQUIPMENT**

\*First time buyers should purchase the kit (removable diverter and element). From then on, only the replacement elements are necessary.
